Greenville, MS, Vicksburg, MS,
Memphis, TN, Cairo IL

This 2007 Lower Mississippi River Navigation Book is the 62nd print edition. It is the first publication where coverage ends at Cairo, IL Mile 954.

The 2007 Navigation Book has been designed to promote safe navigation for both deep-draft and shallow draft vessels on the Lower Mississippi River, Gulf of Mexico to Cairo, IL.

The U. S. Army Corps of Engineers encourages mariners and other users to submit corrections, additions or comments for improving this chart to one of the listed Corps of Engineers Districts.

HORIZONTAL DATUM

The horizontal reference datum of this chart is North American Datum of 1983 (NAD 83) which for charting purposes is considered equivalent to the World Geodetic System 1984 (WGS 84).

Users may plot positions obtained from satellite navigation systems such as the Global Positioning System (GPS) coordinates directly on these chart pages.

North American Datum 1983 graticule is indicated by lines, labeled with degree, minute, second, and hemisphere.

CHARTING DATUMS

Mean Lower Low Water (MLLW) used below Mississippi River, Head of Passes, LA. The Low Water Reference Plane (LWRP) is used for the Lower Mississippi River, Head of Passes upwards.

The LWRP is presented as a dashed line, and computed from the 2002 hydrographic survey. The LWRP below Mile 324 has been adjusted to be referenced to the North American Vertical Datum of 1988 (NAVD 88).

NOTES

For abbreviations and symbols, refer to the NOAA/NGA Chart No. 1 publication: http://www.nauticalcharts.noaa.gov/mcd/enc/index.htm

The bank line represented below Mile 324 was compiled from stereo aerial photography flown between January and February 2002.

This Navigation Chart Book has been corrected through the Local Notice to Mariners published weekly by the U. S. Coast Guard, as of the LNM-39-06. Mariners should update this product to ensure current navigation information is portrayed.

River Mileages on the Mississippi River

The represented river mileage positions were computed as statute mile along the 1962 river thalweg. These river mile positions were set and remain in use today. Therefore these mile markers do not exactly correspond to the current thalweg distances nor to navigational distances as traveled by the mariner; instead, their map positions are to be considered as landmarks and points used for reference purposes.

Of note, prior to 1935, the Mississippi River mileage was measured from a zero at Cairo, Illinois. It is also mile 0.0 for the Upper Mississippi River. At that time the river mileage at New Orleans' Foot of Canal Street was approximately 975 miles. On today's maps, Cairo is 953.8 miles AHP, due to cutoffs made in the 1930s and ongoing river engineering efforts.

From 1935 to 1943, the river mileage was established as Mile 0.0 from the mouth of Southwest Pass. By 1944, the river mileage was determined to be 0.0 from the Mississippi River Head of Passes and it remains in effect today. This adjustment began use of the term "Above Head of Passes" or AHP for referencing current river miles.

WARNING

The prudent mariner will not rely solely on any single aid to navigation, particularly on floating aids. See U. S. Coast Guard Light List for details.

The represented survey information is accurate as of the date of publication or referenced date of source data. Hydrographic survey data is subject to change rapidly due to several factors including but not limited to dredging activity and natural shoaling and scouring processes. The U. S. Army Corps of Engineers accepts no responsibility for changes in the hydrographic conditions which develop after the date of publication.

CAUTIONS

Mariners are warned that logs and other floating debris are constant dangers to navigation.

Small craft operators are warned beware of severe water turbulence caused by large vessels traversing narrow channels.

Night travel by small crafts is not recommended because of the hazard of floating obstructions.

Additional uncharted submarine pipelines and submarine cables may exist within the charted areas.

Not all submarine cables and pipelines are required to be buried, and those that were originally buried may have become exposed. Mariners should use extreme caution when operating vessels in depths of water comparable to their drafts in areas where pipelines and cables may exist, and when anchoring, dredging or trawling.

MISSISSIPPI RIVER LIGHTS

The numbers in parenthesis at the aids to navigation and facilities are distances in statute miles above/below Head of Passes, example:

Devil's Swamp (242.4)
Pumpkin Bezette Range J Front (174.6)
Deer Range "55" (55.4)

MISSISSIPPI RIVER BUOYS

Buoys on the Mississippi River maintained by the U. S. Coast Guard are not shown in this Navigation Book with the exception of bridge approach buoys, Lighted Wreck Buoy "WR4", Mile 115.4, Lighted Wreck Buoy "WR1", Mile 125.0, Medora Crossing Buoy "2", Mile 211.5, Missouri Bend Buoys, "2", "4", "6", "8", "10", 12" Mile 222 and Red Eye Crossing Buoy."2", Mile 223.5.

Buoy locations shown represent approximate placement at a Low Water Reference Plane river stage.

Consult the U. S. Coast Guard Light List and Local Notice to mariners for additional information.

MISSISSIPPI RIVER LOW WATER BUOYS

Due to frequently changing river stages and river currents, which often necessitate the repositioning, discontinuance and establishment of floating aids to navigation, many low water buoys maintained by the U. S. Coast Guard are not shown in this Navigation Book. Consult Local Notice to Mariners for the latest river conditions.

Aids to navigation marking the Intracoastal Waterway exhibit unique yellow symbols to distinguish them from aids marking other waterways. When following the Intracoastal Waterway westward from Carrabelle, FL to Brownsville, TX, aids with yellow triangles should be kept on the starboard side of the vessel and aids with yellow squares should be kept on the port side of the vessel. A horizontal band provides no lateral information, but simply identifies aids to navigation as marking the Intracoastal Waterway.

LOCK INFORMATION

See Code of Federal Regulations, Title 33 Navigation and Navigable Waters, Chapter II – Corps of Engineers, Department of the Army for locking information:
http://www.access.gpo.gov/nara/cfr/waisidx_99/33cfr207_99.html

Daily updates of locking information, closures, anticipated queue times, number of tows waiting, and special instruction may be obtained at: http://www.mvn.usace.army.mil/od/lockupdates/statusindex.asp

Lock Contacts and Information

Lock	Mile	VHF	Office Phone	After Hours	Length x Width
Algiers Lock	88.0	14	(504) 394-5714	(504) 394-7221	760’ x 75’
Empire Lock	29.5	-	-	-	200’ x 40’
Harvey Lock	98.3	14	(504) 366-4683	(504) 366-5187	425’ x 75’
Inner Harbor Navigation Canal	92.6	14	(504) 945-2157	(504) 947-2606	640’ x 75’
Ostrica Lock	25.7	-	-	-	250’ x 40’
Old River Lock	304.0	14	(225) 492-3333	(225) 492-2301	1200’ x 75’
Port Allen Lock	228.5	14	(225) 343-3752	(225) 344-8272	1202’ x 75’

NAVIGATION NOTES

The Prudent Mariner shall not rely solely on any single aid to navigation, particularly on floating aids. See the U.S. Coast Guard Light List for details.

Mariners should be cautioned that all aids to navigation depicted on charts comprise a system of fixed and floating aids with varying degrees of reliability.

The U. S. Coast Guard is responsible for placing and maintaining all aids to navigation. Buoys are set to mark project depths taking into consideration the prevailing river stages and obstructions, as well as the rise or fall of the predicted river conditions. Buoy positions as shown on the chart are “Position Approximate” (PA) locations.

Aids to Navigation may be carried off position by high water-accumulation of drift debris, ice or sunk by collision or other causes. When carried off position, destroyed or removed to prevent loss, buoys are replaced at the earliest opportunity by the U. S Coast Guard.

Buoys should always be left with as wide a berth as possible when passing consistent with the length and width of vessel or tow and the width of the river bend or crossing. A buoy should never be scraped, hit or run over by any vessel at any time. If this occurs the mariner is required to report it to the Coast Guard, 46 CFR 26.08-20.

MARINE INFORMATION

The Eighth Coast Guard District is continuously alert for circumstances, which affect safe and efficient passage of river traffic. The Aids to Navigation Office in New Orleans receives reports from mariners and government agencies and distributes information to mariners through various marine information channels.

The four primary means of passing marine information in the Eighth Coast Guard District:

1. Broadcast Notice to Mariners
2. Local Notice to Mariners
3. Channel Reports
4. Directly from Lockmaster

There are four basic marine information publications printed by either the Coast Guard or U. S. Army Corps of Engineers which should be on all vessels:

1. Corps of Engineers Navigation Charts
2. Navigation Rules, International-Inland
3. Light List, Volume V, Mississippi River System and Volume IV, Gulf of Mexico
4. Corps of Engineers Regulations (Bluebook) 33 CFR 207

HOW TO OBTAIN LOCAL NOTICE TO MARINERS

Local Notice to Mariners may be obtained by:

1. One-way e-mail service, via subscription through the U.S. Coast Guard Navigation Center website, Local Notice to Mariners link at: http://www.navcen.uscg.gov.

2. Or downloaded from the U.S. Coast Guard Navigation Center website, Local Notice to Mariners Link at: http://www.navcen.uscg.gov.

The U. S. Coast Guard, Eighth District offices may be contacted at:

Commander, (DPW)
Eighth Coast Guard District
Hale Boggs Federal Building
500 Poydras Street
New Orleans, LA 70130-3396
(504) 671-2107

Mariners may contact the U. S. Coast Guard Command Center, 24-hours a day at (504) 589-6225.

In case of emergency or accident, contact the appropriate Coast Guard sector office:

1. Sector Upper Mississippi River, (314) 524-7511, Ext. 0
2. Sector Lower Mississippi River, (901) 544-3912, Ext. 4122
3. Sector Ohio Valley, (800) 253-7465
4. U. S. Coast Guard Command Center, 24-hours a day, at (504) 589-6225

AIDS TO NAVIGATION

Aid to Navigation - The term Aid to Navigation means any device external to a vessel intended to assist a navigator to determine position or safe course, or to warn of dangers or obstructions to navigation.

Above Baton Rouge, LA (Mile 235.0) – Western Rivers System of Buoyage

The Western Rivers System – a variation of the standard U.S. Aids to Navigation System is employed on the Mississippi River and its tributaries above Baton Rouge, LA and on certain rivers which flow toward the Gulf of Mexico. For more information on aids to navigation access the U.S. Coast Guard Navigation Center website.

Below Baton Rouge (Mile 235.0) – U. S. Standard Aids to Navigation System of Buoyage

The waters of the United States and its territories are marked to assist navigation by the U.S. Aids to Navigation System. This system encompasses buoys and beacons conforming to the International Association of Lighthouse Authorities (IALA) buoyage guidelines and other short range aids to navigation. All U. S. lateral marks are located in the IALA Region B and follow the traditional 3R rule; red, right, returning from sea. For more information on aids to navigation access the U.S. Coast Guard Navigation Center website.

DGPS FREQUENCIES

The U. S. Coast Guard Navigation Center (NAVCEN) operates the Coast Guard Maritime Differential Global Positioning System (DGPS) Service and the developing Nationwide DGPS Service, consisting of two control centers and over 60 remote broadcast sites. The Service broadcasts correction signals on marine radiobeacon frequencies to improve the accuracy of and integrity to GPS-derived positions. The Coast Guard DGPS Service provides 10-meter accuracy in all established coverage areas.

English Turn, LA
Site Name ENGLISH TURN, LA
Antenna Location 29-52.7N, 89-56.5W
Transmit Frequency (KHz) 293
Transmit Rate (bps) 200
Signal Strength 100uV/m at 170 NM

Vicksburg, MS
Site Name VICKSBURG, MS
Antenna Location 32-19.9N, 90-55.2W
Transmit Frequency (KHz) 313
Transmit Rate (bps) 200
Signal Strength 100uV/m at 115 SM

BoBo, MS
Site Name BOBO, MS
Antenna Location 34-6.91N, 90-41.47W
Transmit Frequency (KHz) 297
Transmit Rate (bps) 200
Signal Strength 100uv/m at 325km

St. Louis, MO
Site Name ST LOUIS, MO
Antenna Location 38-36.7N, 89-45.5W
Transmit Frequency (KHz) 322
Transmit Rate (bps) 200
Signal Strength 100uV/m at 115 SM

Additional information may be obtained from the U. S. Coast Guard Navigation Center website, http://www.navcen.uscg.gov.

CHART SYMBOLS

Above Baton Rouge, LA (mile 235.0) to Memphis, TN, Western Rivers System of Buoyage

NR – Diamond-shaped dayboard divided into four diamond-shaped colored sectors with the sectors at the side corners white and the sectors at the top and bottom corners red, with white reflective border.

NG – Diamond-shaped dayboard divided into four diamond-shaped colored sectors with the sectors at the side corners white and the sectors at the top and bottom corners green, with white reflective border.

TR – Red Triangle

	Fl (2)	Flashing (2)
	Fl	Flashing
	Occ	Occulting
	Fl	Flashing
	Iso	Isophase

SG – Green Square

	Fl	Flashing
	Occ	Occulting
	Q F	Quick Flashing
	Iso	Isophase

Below Baton Rouge, LA (mile 235.0) to Gulf of Mexico, U. S. Standard Aids to Navigation System of Buoyage

SG – Green Square

	Fl (2)	Flash (2)
	Fl	Flashing
	Occ	Occulting
	Q F	Quick Flashing
	ISO	Isophase

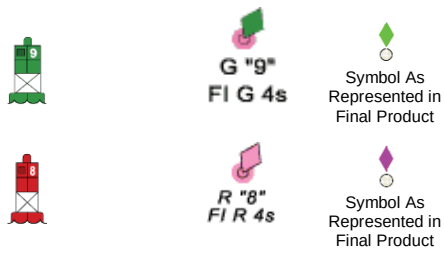
TR - Red Triangle

	Fl (2)	Flashing (2)
	Fl	Flashing
	Occ	Occulting
	Fl	Flashing
	Iso	Isophase

G C – Green Can Buoy

R N – Red Nun Buoy

G – Green Buoy



R – Red Buoy

KRW- Rectangular Red dayboard bearing a central white stripe

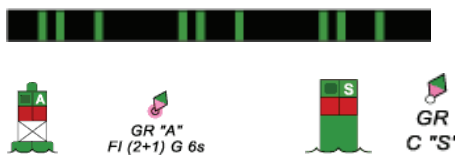
KWG - Rectangular White dayboard bearing a central green stripe

KWR - Rectangular White dayboard bearing a central red stripe

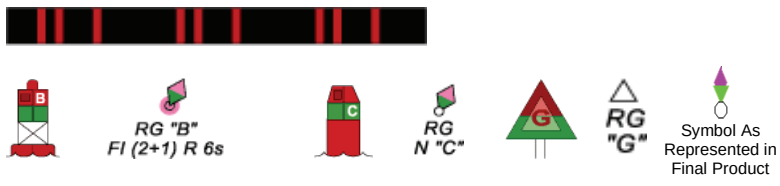
SY – Intracoastal Waterway Yellow Square

TY – Intracoastal Waterway Yellow Triangle

JG- Green and Red Junction Dayboard



JR – Red and Green Junction Dayboard



NB – Diamond-shaped dayboard divided into four diamond-shaped colored sectors with the sectors at the side corners white and the sectors at the top and bottom corners black, with white reflective border.

Anchorage Day Board

HYDROGRAPHIC FEATURES

Sailing Line - The Sailing Line shown is an approximate representation of the track a down bound vessel would follow during a low river stage equal to the Low Water Reference Plane water level.

Low Water Reference Plane - The Low Water Reference Plane (LWRP) from Mile 313.7 to 242.0 is based on 97% discharge duration at Tarbert Landing (1974-1993) and corresponding to stages from 1974 – 1993.

LWRP from Mile 242.0 to Head of Passes is based on the Mean of 40 years (1891-1930) low water at Regular (M.R.C.) gauges and adjusted. from low water information obtained Sept 1931 and Nov. 1933. (Include graph of LWRP).

LWRP from Mile 320 to Mile 610 is the 1993 LWRP computer from 1982 to 1991 average low water stage at discharge equaled or exceeded 97% of the time.

Water Edge equals Low Water Reference Plane +5 feet above Mile 320 AHP. Water Edge equals Low Water Reference Plane zero below 320 AHP.

Drying Height Area is defined as an area denoting the range between water edge and high water conditions. Drying height is denoted as dark brown in this publication. The feature applies only to that section of the river that is not controlled by a lock and dam, also know as open river.

Color for Water Areas
A dark blue tint is shown on pages in this Navigation Book to represent areas of less than Project Depth. The light blue areas represents depths of project depth or greater.

The navigation channel will be marked with buoys as per U.S. Coast Guard.

Channel data a depicted is as of date of survey.

Mean Lower Low Water – (MLLW) The tidal datum that is the average of the lowest low water height of each tidal day observed over the National Tidal datum Epoch, 19-years metonic cycle.

Channel Condition Reports and Surveys
In general, this Navigation Book gives project depths for deep-draft ships, 45', up to Baton Rouge LA (Mile 232.2) and project depth for shallow draft, 9', tows above Baton Rouge, LA. In all cases mariners are advised to consult with pilots, local, State or Federal authorities for the latest channel controlling depths. The controlling depths are shown on these charts and published in the appropriate Local Notice to Mariner. Current channel conditions for high shoal areas at passes and at Mississippi River Crossings are obtained from hydrographic surveys and posted to: http://www.mvn.usace.army.mil/ChannelSurveys.

Submarine Cables and Submerged Pipelines
Submarine Cables and Submerged Pipelines cross many of the navigable waterways used by both large and small vessels. Normally warning signs are posted on the banks where submerged cables or a pipeline exists to warn mariners of their existence; in some areas warning signs are not always present.

CHART PAGE DESCRIPTIONS
Courses – These are true and given in degrees clockwise from 000° (north) to 359°. Courses given are courses to be made good.

Bridges and Cables
Vertical Clearances for Bridges are in feet above the appropriate reference gage zero reading. To obtain actual bridge clearness the mariner must subtract the appropriate gage river stage reading from the bridge clearance given.

Vertical Clearances for Overhead cables are in feet above the appropriate river gage mean high water readings; they may be as-built (verified by actual inspection after completion of structure), laser-range surveyed or authorized (design values specified in permit issued prior to construction. No differentiation is made in this Navigation Book between as-built, re-surveyed or authorized clearances.

Vertical Clearance for drawbridges and lift bridges are for the closed position and the open position as referenced to the appropriate river or tide gage as listed.

Vessels with masts, stacks, booms or antennas should allow sufficient clearance under power cables to avoid arching.

Horizontal clearances for all bridges are in feet, as measured from the narrowest features. Mariners should use caution when navigating within these restricted areas.

Obstructions
Wrecks and other obstructions are mentioned only if of a relatively permanent nature and in or near normal traffic routes.

Depth is the vertical distance from the chart datum to the bottom and is expressed in feet. Depth contours are lines connecting points of equal depth.

Controlling Depth of a channel or crossing is the least depth within the limits of the channel; it restricts safe use of the channel to drafts of less than that depth.

Federal Project Depth is the designed dredging depth of a channel constructed by the U. S. Army Corps of Engineers; the project depth may or may not be the goal of maintenance dredging after completion of the channel and for this reason project depth must not be confused with controlling depth.

Region Covered	Begin Mile	End Mile	Project Depth
Baton Rouge, LA to Cairo, IL	234	960	9′ [1]
Philadelphia Point to Baton Rouge, LA	180	233	40'
Gulf of Mexico to Philadelphia Point	-22	180	45'

[1] Maintained depth is 9′ Project Depth plus 3' advance maintenance dredging.

U. S. Buoyage Systems – Aids to Navigation
Aids to navigation depicted on charts comprise a system of fixed and floating aids with varying degrees of reliability. Therefore, prudent mariners will not rely solely on any single aid to navigation, particularly a floating aid. Consult the latest Light List or the Coast Guard Navigation Center website at: http://www.navcen.uscg.gov.

The mariner is also cautioned that buoys may be missing or off station as the result of ice, running ice or other natural causes (high water), collisions, or other accidents.

Therefore, a prudent mariner must not rely completely upon the position or operation of floating aids to navigation, but will also utilize bearings from fixed objects and aids to navigation on shore. Further, a vessel attempting to pass close aboard always risks collision with a yawing buoy or with the obstruction that the buoy marks.

The U. S. Coast Guard Light List Volume V, Mississippi River System and Light List Volume IV, Gulf of Mexico, should be consulted for determination between Federally Maintained Aids to Navigation and Private Aids to Navigation.

Western Rivers System of Buoyage
The Western Rivers System – a variation of the standard U.S. Aids to Navigation System is employed on the Mississippi River and its tributaries above Baton Rouge, LA and on certain rivers which flow toward the Gulf of Mexico. The Western Rivers System varies from standard U. S. system, as follows:

1. Aids to navigation are not numbered.
2. Numbers on aids to navigation do not have lateral significance, but rather indicate mileage from a fixed point (normally a river mouth or confluence).
3. Diamond shaped crossing dayboards, red and white or green and white as appropriate are used to indicate where the river channel crosses from one bank to another.
4. Lights on the green aids to navigation show a single-flash characteristic, which may be green or white.
5. Lights on the red aids to navigation show a group-flash characteristic, which may be red or white.
6. Isolated Danger marks are not used.

U. S. Standard Aids to Navigation System of Buoyage
The waters of the United States and its territories are marked to assist navigation by the U.S. Aids to Navigation System. This system encompasses buoys and beacons conforming to the International Association of Lighthouse Authorities (IALA) buoyage guidelines and other short range aids to navigation. All U. S. lateral marks are located in the IALA Region B (IALA B)and follow the traditional 3R rule; Red, Right Returning from sea. For more information on aids to navigation access the U.S. Coast Guard Navigation Center website at: http://www.navcen.uscg.gov

DISTRICT	HYDROGRAPHIC SURVEY DATES
MEMPHIS	JANUARY – APRIL 2004
VICKSBURG	MAY – JUNE 2005
NEW ORLEANS	AUGUST – DECEMBER 2003

COMMUNICATIONS

Normal Lower Mississippi River VHF communication channels:

Channel Number	Usage
16	International Distress, Safety and Calling Channel. Ships required to carry radio, the USCG, and most coast stations maintain a listening watch on this channel.
22A	USCG Liaison and Maritime Safety Information Broadcasts. Broadcasts are announced on channel 16.
14	Most locks monitor and work this channel.
13	Devil's Swamp Light, Mile 242.4, AHP and above.
67	Devil's Swamp Light, Mile 242.4, AHP to the Gulf of Mexico.

Both channels 13 and 67 should be monitored by vessels transiting in this locality to ensure being altered to all traffic movements in the area.

Maritime Safety Information Broadcasts

The U.S. Coast Guard and other government agencies broadcast different kinds of maritime safety warnings, using a variety of different radio systems to ensure coverage of different ocean areas for which the United States has responsibility, and ensure all ships of every size and nationality can receive this safety information. All broadcasts except those over VHF and MF radiotelephone are made by computer.

Coastal Maritime Safety Broadcasts

VHF Marine Radio Broadcasts. Urgent marine navigational and weather information is broadcast over VHF channel 22A (157.1 MHZ) from over 200 sites covering the coastal areas of the U.S., including the Great Lakes, major inland waterways, Puerto Rico, Alaska, Hawaii and Guam. Broadcasts are first announced over the distress, safety and calling channel 16 before they are made. All ships in U.S. waters over 20m in length are required to monitor VHF channel 16, and must have radios capable of tuning to the VHF simplex channel 22A.

U. S. Coast Guard National Distress System

National Distress System VHF site consists of a receiver guarding VHF Channel 16, the maritime distress, safety and calling channel, and a transceiver capable of operating on one of six fixed maritime channels. Two of these channels are always Channel 16 and 22A.

Vessel Traffic Services

The purpose of a Vessel Traffic Service (VTS) is to provide active monitoring and navigational advice for vessels in particularly confined and busy waterways. All Vessels transiting the Lower Mississippi River, New Orleans Harbor area, Mile 103 AHP to Mile 88 AHP are required to contact New Orleans Vessel Traffic Service on VHF Channel 67 at the following locations:

Contact Governor Nicholls Light (VHF Ch 67):

- All Northbound Traffic at Chalmette Ferry Crossing, Mile 88.6 AHP.
- All Northbound Traffic at the Industrial Forebay, Mile 92.8 AHP.
- All traffic exiting the Inner Harbor Navigational Locks, before entering the Mississippi River.

Contact Gretna Light (VHF Ch. 67):

- All South Bound Traffic at Cargill Westwego Grain Elevator, Mile 103.0 AHP.
- All South Bound Traffic at Marlex Dock s", "The Navy Ships," Mile 99.1, AHP.

All other traffic departing docks within Mile 103 to Mile 88 area, contact the appropriate Traffic Light to request vessel movements.

NOAA Weather Radio Frequencies

Channel	Frequency (MHz)
WX1	162.550
WX2	162.400
WX3	162.475
WX4	162.425
WX5	162.450
WX6	162.500
WX7	162.525

U. S. Marine VHF Channels

Channel Number	Ship Transmit MHz	Ship Receive MHz	Usage
01A	156.050	156.050	Port Operations and Commercial, VTS. Available only in New Orleans / Lower Mississippi area.
05A	156.250	156.250	Port Operations or VTS in the Houston, New Orleans and Seattle areas.
06	156.300	156.300	Intership Safety
07A	156.350	156.350	Commercial
08	156.400	156.400	Commercial (Intership only)
09	156.450	156.450	Boater Calling. Commercial and Non-Commercial.
10	156.500	156.500	Commercial

ADDITIONAL U. S. ARMY CORPS OF ENGINEERS

Controlling Depth of a channel or crossing is the least depth within the
Inland Electronic Navigational Charts

The U.S. Army Corps of Engineers produces Inland Electronic Navigational Charts (IENCs) for the Lower Mississippi River, Mile 236 upwards throughout the Inland Waterway System.

These IENCs are created for use in Electronic Chart Systems (ECS) to position a vessel upon the electronic navigational chart display. Use of ECS in conjunction with IENCs does not eliminate the USCG paper chart carriage requirement. Until such guidance and policy is established, IENCs provide a valuable adjunct to the 2007 Navigation Book.

IENCs offer significant benefits to vessels including accurate and real-time display of vessel position relative to waterway features, voyage planning and monitoring tools, Automatic Identification Systems (AIS) integration, and training tools for new personnel and integrated display of river charts, radar, and AIS.

IENC chart products, services, and information are available for download at: http://www.age.army.mil/echarts

IENC Maintenance

All Mississippi River IENCs are maintained with updates of new or corrected Local Notice to Mariner information as it becomes available. IENCs are updated at least annually and monthly maintenance is currently underway.

Specialized IENCs

The U. S. Army Corps of Engineers has and can develop large-scale specialized IENCs to respond to unique or short-term navigational requirements within the Inland Waterways System.

IENC information and contact information for unique IENC or charting chart products product requirements contact the Corps via:
http://www.age.army.mil/echarts

Other Electronic Navigational Charts

The National Oceanic & Atmospheric Administration's (NOAA) Office of Coast Survey produces Electronic Navigational Charts (ENC) for the Mississippi River, Mile 236 to the Gulf of Mexico and associated side channels. NOAA ENCs are available the Navigation Chart site at:
http://www.nauticalcharts.noaa.gov/mcd/enc/index.htm

Port Series Report Books

The U. S. Army Corps of Engineers, Navigation Data Center, produces the Port Series Report Books that describe the physical and inter-modal (infrastructure) characteristics of the coastal, Great Lakes, and inland ports of the United States. Imagery sheets are included that reference the Port Series facility numbers for easy of locating individual facilities. Port Series products are may be obtained from:

Port Series Reports
U.S. Army Corps of Engineers
CEIWR-Navigation Data Center
7701 Telegraph Road, Casey Building
Alexandria, VA 22315-3686

http://www.iwr.usace.army.mil/ndc

Report No.	Area of Coverage
20	Port of New Orleans, LA
20A	Mississippi Ports Below and Above New Orleans, LA
21	Ports of Baton Rouge, LA and Lake Charles, LA
71	Ports of Memphis, TN, Helena, AR and Ports on the Lower Mississippi River
72	Ports of Natchez, Vicksburg and Greenville, MS and Ports on the Lower Mississippi River

Waterborne Commerce Statistics Center

The U. S. Army Corps of Engineers, Waterborne Commerce Statistics Center under the authority of the Rivers & Harbors Act of 1922, collects, processes, distributes, and archives vessel trip and cargo data.

Under Federal law, vessel operating companies must report domestic waterborne commercial movements to the Corps.

Data summaries include origin to destination information of foreign and domestic waterborne cargo movements by region and state, and also waterborne tonnage for principal ports and state and territories. Internal waterway tonnage indicators are updated monthly on the NDC web site.

This acquired vessel movement data is primarily for Corps and other government agencies' use. However, summary statistics, which do not disclose movements of individual companies, are also released to private companies and to the general public

The Waterborne Commerce Statistics Center's summarizes this data in the publication, *Waterborne Commerce of the United States.* It is issued in five parts (one to cover each coast and a national summary). A database that aggregates information of foreign and domestic waterborne cargo movements is available on CD. The publication *Transportation Lines of the United States* contains listings of domestic vessel operators, details their equipment and references their service areas. Most data are available in both hard copy and electronic form. Specialized data processing requests are considered on a case-by-case basis. Products and services may be obtained by request to:

Waterborne Commerce Statistics Center (WCSC)
P.O. Box 61280

CAUTION

OLD RIVER CONTROL STRUCTURES

Very dangerous currents in and near beginning of inflow channels when structures are in operation. Flashing amber lights and horns are located on the south points of the inflow channels of the Low Sill and Auxiliary structures. The inflow channels are NOT navigable channels, therefore, under no circumstances should any vessel attempt to enter. Tows and other vessels should navigate as far as possible from this area and as close to the left descending bank of the Mississippi River as safety will permit.

OLD RIVER LOCK DIMENSIONS
WIDTH: 75'
LENGTH: 1190'
LOW SILL ELEV: -11' N.G.V.D

Depth over revetment -32 ft. N.G.V.D.

Connecting channel via Old River Lock with Old, Red Quachita River and Atchafalaya River Systems

LOCAL NOTICE TO MARINERS 22 Sept 2010

LA - LOWER MISSISSIPPI RIVER - ABOVE BATON ROUGE - Bridge Construction – No Wake Zones - UPDATE

Construction continues on the new fixed span bridge across the Lower Mississippi River, at Mile 261.8, AHOP, between St. Francisville and New Roads, Point Coupee Parish and West Feliciana Parish, Louisiana. Numerous crane barges and material barges are working in the area around the bridge pier construction sites, 24-hours a day, 7-days a week. Frequent crossings of the navigation channel are made day and night by a crew boat and tugs with material barges.

UPDATE: Tower cranes have been erected on the south side of each river pier location and are in use throughout the day and night. Loaded material barges are moored on the south side of each river pier. Main span steel erection has begun with deck construction advancing over the center on the navigation channel throughout the rest of this year.

In order to ensure the safety of workers, all mariners are requested not to pass close aboard the cofferdams and to transit the construction site at their slowest safe speed to minimize wake. Mariners are advised to monitor Marine Safety Bulletins, issued by the Coast Guard Coast Guard Marine Safety Unit Baton Rouge, Waterways Management Division, for updates on safety zones and possible waterway closures during these operations. The M/V AUDUBON is on scene and will be monitoring VHF-FM Channels 13 or 74. Mariners are urged to contact the M/V AUDUBON in advance of arrival at the construction site for passing instructions. For up-to-date information, mariners can contact Audubon Construction at (225) 650-0735 or (225) 650-0752.

John James Audubon Bridge *Connecting New Roads and St Francisville LA*		
Construction Timetable as of September 2010	**In Progress**	**Complete**
Continued design phase of the project		X
Construction of towers on both banks		X
Construction of east and west high-level approaches	X	
Realignment of all smaller bridges	X	
Completion of all smaller bridges		X
Fabrication of expansion joints		X
Placing second layer of asphalt on eastern approach roadway		X
Stay cable installation	X

Channel line marked by shore lights and crossings buoyed during low river stages. The number and location of buoys will vary according to river conditions. See New Orleans District "Navigation Bulletins" for latest sailing directions from Mile 115.0 AHP Fairview Light to Artonish Light Mile 322.5 AHP.

NOTE: Western Fleet near RM 108 extends above the light at the 12 Mile Point.

NOTE: Construction continues on the widening project of the Huey P. Long, U.S. 90 Bridge across the Lower Mississipi River, mile 106.1 above Head of Passes.

The entire project will be completed in 2013. Mariners are urged to monitor Marine Safety Bulletins, issued by Coast Guard Sector New Orleans, Waterways Management Division, for updates on the schedules for blockages, speed restrictions and waterway closures. A Marine Safety Bulletin and current schedule can be obtained by sending a request to U.S. Coast Guard Sector New Orleans at: D08-PF-SECNEWORLEANS-WATERWAYS@uscg.mil, or by calling (504) 565-5103. Bulletins are also attached to Local Notice to Mariners each week. Additionally, mariners can contact the U.S. Coast Guard Vessel Traffic Center 24-hours a day, at (504) 589-2780 or on VHF-FM Channels 16 or 67 and on VHF-FM Channel 12, in the construction area.

LOWER MISSISSIPPI RIVER

MISSISSIPPI VALLEY DIVISION

IHNC-MRGO Surge Barrier			
Component	**Start Construction**	**End Construction**	**Status**
GIWW Sector Gate (north)	January-2010	June- 2011	Open
GIWW Barge Gate (south)	Working	May-2010	Closed
Bayou Bienvenue Gate	February-2010	May-2011	Closed due to construction of barrier
IHNC-MRGO Surge Barrier	Working	September-2010	Ongoing

CAUTION: Effective August 16, 2010 and continuing for the expected closure duration of one year, the U.S. Army Corps of Engineers will close the main channel to all navigation interests at the future IHNC Gulf Intracoastal Waterway (GIWW) Sector Gate structure location, located at approximately mile 15.5 EHL. Closure is required for the installation of the new cofferdam for the future GIWW Sector Gate.

This main channel closure will result in a complete diversion of all marine traffic through the new GIWW Bypass Gate Structure. Signal pile clusters with red lighting will be in place to aid marine traffic in transiting the Bypass Gate Structure.

The support vessels for this work will be monitoring marine channels 16 and 18. THE MAIN CHANNEL AREA WILL BE COMPLETELY CLOSED TO ALL MARINE TRAFFIC AND COFFERDAM INSTALLATION FLOATING EQUIPMENT WILL BE ACTIVE FOR THE DURATION OF THE CLOSURE.

A Helper Assistant Boat/Contact Vessel (HAB/CV) will be stationed in the area to provide assistance and information in the construction zone. Call sign is "GIWW Watch Dog" and will be monitoring marine channel 18A and 16. The "GIWW Watch Dog" is currently the M/V JENNIFER B. SETTOON. All passing arrangements through the construction area by marine traffic must be managed by the "GIWW Watch Dog".

C.J. Mahan emergency number: (504) 662-0032 Michael Gong for Shaw Environmental: (504) 202-7180

Caution:
The Mississippi River Gulf Outlet (MRGO) is permanently closed at Bayou La Loutre near Hopedale in St. Bernard Parish, La (Channel mile marker 36). Inbound and outbound vessel traffic is no longer able to safely travel through the area at the closure site. Boaters are urged to use caution in the area around the rock closure structure and to use alternative routes for marine transit around the area.

Waterway Deauthorized - Mississippi River to Gulf Outlet (MRGO) has been officially deauthorized as of June 5, 2008.

NAVIGABLE WATERWAYS
MISSISSIPPI VALLEY DIVISION

Waterway	Miles of Project Channel	Project Dimensions	Head of Navigation	Remarks
Mississippi River MO, IL, KY, TN, AR, MS, LA	955.8 - 233.4	Cairo - Baton Rouge; 12 ft. deep, 300 ft. wide.		
	233.4 -104.0	Baton Rouge to New Orleans; 45 ft. deep, 500 ft wide.		
	104.0 - 86.7	Port Limits of New Orleans; 45 ft. deep by 750 ft. wide channel within limits of the 35 ft. deep by 1500 ft. wide channel.		
	86.7 - 0	New Orleans to Head of Passes; 45 ft. deep by 750 ft. wide.		
	0 - 14.2 B.H.P.	Head of Passes to Mouth of South Pass, 30 ft. deep by 450 ft. wide, with 30 ft. deep, by 600 ft. wide over bar.		Maintained to 17 feet.
	0-21.2 B.H.P.	Head of Passes - Mouth of Southwest Pass, 45 ft. deep by 750 ft. wide, with 45 ft. deep by 600 ft. wide over bar.		
Wolf River (Memphis Harbor) TN	0- 3.0	Project (based on modification of previous project as provided in 1958 Flood Control Act) provides for a channel 9 ft. deep at low water from mouth to Mi. 3 with bottom widths of 250 ft. from Keel Ave, (Mi. 1.75) and 200 ft. from Kell Ave. to Mi. 3.		9 feet at low water maintained from harbor mouth to Mi. 3 near North Second Street (closure dam).
St, Francis River AR	0 - 45.0	None	Mouth of Round Pond Cut-off, 45 miles above mouth.	During low water period, depths do not exceed 1 to 2 feet.
White River AR	0 - 169.0	None	Branson, MO - 520 miles above mouth.	Mouth to Peach Orchard Bluff, AR, a navigable depth of more than 4.5 feet for 8 months, and less than 4.5 feet for 4 months.
Arkansas and Verdigris Rivers AR, OK	0- 72.5 (1) 72.5 - 436.6 (2)	Channel widths are generally 300 feet on the White River and Arkansas Post Canal, 250 feet on the Arkansas River and 150 feet on the Verdigris River. The channel has a minimum depth of 9 feet throughout.	Catoosa, OK on the Verdigris River. Mouth of White to entrance to Arkansas and Vedigris Rivers, 386.3 Mi., to Catoosa, OK, 436.6 Mi.	Navigation channel marked by buoys, shore lights and day marks. There are 17 1ocks, 12 in Arkansas and 5 in Oklahoma. All lock chambers are 110 feet wide by 600 feet long.
Yazoo River	0- 188.1	A 9 ft. depth is presently available about 5 months, with controlling depths of 3 to 4 feet over the bars during low water periods.	Confluence Yalobusha and Tallahatchie Rivers, Mi. 188.1.	A 9-foot minimum depth by 1 SO-foot minimum width channel is authorized from the mouth to Greenwood, MS. Construction of the authorized project has not been initiated.
Big Black River MS	0 - 71.9	None	Illinois Central RR Bridge, Mi 71.9.	Between January and June the depth will exceed 4 ft., remainder of year controlling depth is 1 to 2 ft.
Red River Waterway LA, TX, AR, OK	MS River to Shreveport, LA Reach 0 - 236.0	9' x 200' channel from the Mississippi River to Shreveport, LA and then to Daingerfield, TX via Twelvemile and Big Cypress Bayous.	Shreveport, LA, Post Project Mile 236.0.	Lower 31 Miles of the Overton - Red River Waterway incorporated into this project.
	Shreveport, LA to Daingerfield, TX Reach 236.0 - 294.0		Upper end of Lake 0' The Pines near Daingerfield, TX Mile 294.0.	Shreveport to Daingerfield Reach currently in inactive status.
Ouachita and Black Rivers LA, AR	0 - 337.0	9 ft. deep by 100 ft. wide, channel from the Mouth of the Black River (Mile 0) to Camden, AR (Mile 337.0) (1972 Mileage).	Camden, AR, Mi. 337.0	Lock dimensions - 84 feet wide x 600 feet long.
Atchafalaya River LA (MS River to Morgan	123.0	12 ft. deep and 125 ft. wide from Mississippi River, Mi. 304 AHP to Morgan City, LA.	Connects with Mississippi River, via Old River Lock opposite Angola, LA, (Mi. 304 AHP).	Project completed February 1956 12.0 ft. depth maintained.
(Morgan City to Gulf of Mexico)	33 .5	20 ft. deep and 200 ft. wide from -20 ft contour in Atchafalaya Bay to -20 ft contour in Gulf of Mexico.		The 20 ft. contour in Gulf of Mexico is located 25 miles from mouth of river.
Intracoastal Waterway Gulf Section	302.4 (via Harvey Lock) 303.5 (via Algiers Lock) 64.1 (to Port Allen Lock) 9.0 (to Plaquemine Lock)	Lake Borgne Lt. No. 29 to New Orleans, LA, 12 ft. deep x 150 ft. wide; Harvey Canal, 12 ft. deep x 125 ft. wide; Mississippi River via Algiers Lock (New Orleans, LA), via Houma By-Pass to Lower Atchafalaya River (Morgan City, LA) 16 ft. x 150 ft. wide; Morgan City, LA to Sabine River, 16 ft. x 200 ft. wide.		Plaquemine Lock was permanently closed to navigation on 29 September 1961. Operation of the highway and railroad bridges immediately downstream from the lock was discontinued as of the same date. A channel of interim section (8ft. by 50 ft.) connects with Franklin, LA (5.8 miles). Work has not been initiated on enlarging the existing 12' x 125' channel to 16' x 150' and 16' x 200' between Mississippi River via Algiers Lock (New Orleans, LA) to Sabine River.
Baton Rouge Harbor (Devil's Swamp)	5.0	12 ft. deep and 300 ft. wide.	2.5 Miles above mouth at Mississippi River.	The harbor is completed to Mi 2.5 and maintained to a depth of -12.0 M.L.W. and 150 ft. interim width. The harbor is to be extended to Mi. 5.0 when and as needed.
Waterway from Intracoastal Waterway to Bayou Dulac (Bayous Grand Caillou and Le Carpe) LA	16.3	Bayou Grand Caillou, 5 ft. deep and 40 ft. wide; Bayou Le Cape, 10 ft. deep and 45 ft. wide.	Confluence of Bayou Le Carpe at Gulf Intracoastal Waterway (1.5 miles south-east of Houma, LA).	
Houma Navigation Canal, LA	40.5 with 14.5 miles in Terrebonne Bay	15 ft. deep and 150 ft. wide; Cat Island Pass 18 ft. deep and 300 ft. wide.	Confluence of Houma Navigation Canal and Gulf Intracoastal Waterway (Approx. Mile 59.6, west of Harvey Lock).	

NAVIGABLE WATERWAYS
MISSISSIPPI VALLEY DIVISION

Waterway	Miles of Project Channel	Project Dimensions	Head of Navigation	Remarks
The Inland Waterway (From Franklin to the Mermentau River, LA)	90.0	Depth 5 ft., width 40 ft.		Hanson Canal and Lock, between Bayou Teche and G.I.W.W., donated in fee to St. Mary Parish Police Jury. Other portions of project replaced by G.I.W.W. and Mermentau River, LA Project.
The Inland Waterway (From Vermilion Bay, LA to Mermentau River LA)	47.6	Depth 5 ft., width 40 ft.		
Bayous Petit Anse Tigre and Carlin LA	16.1	Bayou Petit Anse, 9 ft. deep by 80 ft. wide; Mcilhenny Canal (Avery Canal), 7 ft. deep by 60 ft. wide; Bayou Carlin, 9 ft. deep by 80 ft. wide. Mooring area 9 ft, deep by 1300 ft, long, width varying from 125 ft. to 200 ft. along right bank of Bayou Carlin below the south edge of Delcombre, LA.	(See remarks)	Bayou Petit Anse at Highway bridge north of Avery Island, LA, 9.1 miles to Vermilion Bay. Mi. 0 is at Intercoastal Waterway; Bayou Carlin at Lake Peigneur 1.5 miles north of Delcambre, LA, 7.6 miles to mouth of Bayou Petit Anse. Mcllhenny Canal (AveryCanal) at Intracoastal Waterwau (Mi. 0) to Vermilion Bay (Mi. 2).
Bayou Tecbe and Vermililon River LA	51.0	Bayou Teche; Mi. 0 to 54.5, Mouth to New Iberia 8 ft. deep, 80 ft. wide; Mi. 54.5 to 72.5, New lberia to Keystone Lock, 6 ft. deep, 60 ft. wide; Mi. 72.5 to 106.5, Keystone Lock to Arnaudville, 6 ft. deep, 50 ft. wide. Vermilion River: 8 ft. deep and 80 ft. wide from Vermilion Bay to the Intracoastal Waterway; 9 ft. deep and 100 ft. wide from Intracoastal Waterway to Mi. 52.0, Lafayette, LA.		
Mermentau River LA (Above G.I.W.W.)	34.0	9-ft, by 100-ft. channel, junction of Bayous Des Cannes and Nezpique to the Intracoastal Waterway, Gulf Section.	Junction of Bayou Des Cannes and Nezpique, 2.25 miles above Mermentau, LA.	12' x 125' & 200' authorized.
Freshwater Bayou LA	19.85 3.22 Mi. Bar Channel	Channe112 ft. deep and 125 ft. wide from the Gulf Intracoastal Waterway at mile 161.2 west of Harvey Lock to the 12 foot depth contour in the Gulf of Mexico with increased width to 250 feet in the Gulf approach as may be found advisable; jetties from the shoreline to the 6 foot depth contour in the Gulf of Mexico; and a lock 84 ft. wide and 600 ft. long near the Gulf of Mexico.	Junction with Gulf Intra coastal Waterway (Mi. 161.2 west of Harvey Lock).	Freshwater Bayou Lock opened to navigation 27 July 1968.
Calcasieu River and Pass LA	122.5	Channel 35 ft. deep by 250 ft. wide from vicinity of U. S. Highway 90 to the wharves at Port of Lake Charles. Channel 40 ft. deep by 400 ft, wide from the wharves at Lake Charles to the jettied channel at Gulf of Mexico, including Clooney lsland Loop, 40 ft. x 400 ft., and Coon Island Ship Channel 40 ft. x 200 ft. Cbannel 42 ft. deep by 800 ft. wide from the jettied channel to the 42 ft. depth contour in the Gulf of Mexico.	Phillips Bluff, LA, 85.9 miles to mouth in the Gulf of Mexico.	
Lake Charles Deep Water Channel, LA	24.9	30 ft. deep and 125 ft.	Navigable throughout; Mi. 266.0 (G.I.W.W mileage) at Sabine River south of Orange, TX.	
Waterway from Empire, LA to the Gulf of Mexico	10	9 ft. deep and 80 ft. wide	Mi. 29.5 A.H.P. (Mississippi River mileage) 10 miles above Gulf of Mexico shore line.	
Grand Bayou Pass, LA	--	6 ft. deep and 60 ft. wide entrance bar Gulf of Mexico.		
Barataria Bay Waterway, LA	43.6	Project authorized by River and Harbor Act July 1958. Provides for a 125 ft. by 12 ft. channel from G.I.W. to Grand Isle, and thru Barataria Pass with extension for 4.3 mi.,12 ft x 250 ft. bar entrance channel from Barataria Pass along N. side of Grand Isle thru B. Rigaud.	Junction of Bayou Villars and Bayou Barataria with the Gulf Intracoastal Waterway (Vic. Mile 115.0)	
Mississippi River Gulf Outlet, LA		36 ft. deep and 500 ft. wide to Chandeleur Islands, thence increasing to 38 ft. deep and 600 ft. to the 38 ft. contour in the Gulf of Mexico.		Modification of the Mississippi River - Baton Rouge to the Gulf of Mexico project provides for a tidewater channel from the Inner Harbor Navigation Canal at New Orleans extending southeast as a land and water cut to and through Chandeleur Sound and Islands to the 38 ft. contour in the Gulf of Mexico.
Mississippi River Outlets, Venice, LA (Tiger Pass)		14-ft. deep 150-ft wide to the jettied channel at the Gulf of Mexico (approximately mile 12.5), thence increasing to 16-ft. deep and 250-ft. wide to the 16-ft.contour in the Gulf of Mexico.	Head at Mississippi River, Mile 10.0 A.H.P. (Mississippi River Mileage).	
Mississippi River Outlets, Venice, LA (Baptiste Collette)		14-ft. deep and 150-ft. wide to the jettied channel at Gulf of Mexico (approximately mile 6.0), thence increasing to 16-ft. deep and 250-ft. wide to the 16-foot contour in the Gulf af Mexico.	Head at Mississippi RiverMile 11.5 A.H.P. (Mississippi River Mileage).
